PROFESSIONAL SUMMARY

Principal Cloud Infrastructure Architect with 10+ years engineering mission-critical AWS/GCP Kubernetes platforms, distributed microservices, and automated multi-region disaster recovery systems.

WORK EXPERIENCE

Principal Infrastructure Engineer | CloudNative Systems | 2021 - Present

- Designed fault-tolerant multi-cluster EKS infrastructure running 400+ microservices with 99.999% SLA.
- Implemented automated FinOps governance reducing cloud compute spend by \$520,000 annually across 3 AWS regions.
- Established GitOps pipeline using ArgoCD and Helm, reducing rollback time from 30 mins to 45 secs.

Senior Platform Engineer | NexaData Corporation | 2017 - 2021

- Scaled Kafka event streaming cluster handling 1.2 billion daily messages with sub-20ms p99 consumer lag.
- Engineered automated database failover using PostgreSQL replication across availability zones, ensuring zero data loss.

EDUCATION

Master of Science in Computer Engineering | University of Texas at Austin | 2017

Bachelor of Science in Electrical Engineering | Texas A&M University | 2015

TECHNICAL SKILLS

Languages: Go, Python, TypeScript, Bash, SQL, Rust

Cloud & Containers: AWS (EKS, RDS, S3, IAM), GCP, Kubernetes, Docker, Terraform, Helm

Streaming & Storage: Apache Kafka, PostgreSQL, Redis, Elasticsearch, DynamoDB

DevOps & Observability: ArgoCD, CI/CD, Prometheus, Grafana, OpenTelemetry, Datadog

Security & Architecture: OAuth2, SPIFFE, Vault, Zero Trust, Distributed Systems

FEATURED PROJECTS

OpenKube Mesh: Open-source Kubernetes sidecar controller with 1,200 GitHub stars (Go, K8s API).

CloudCost Optimizer: Automated serverless resource reclamation daemon saving 25% idle compute.
